LogiMAT 2010, Stuttgart  
Hall 1, stand 220 // Preliminary report 2

March 2010

## psb focuses on »green logistics«

**With the presentation of the new psb shuttle system vario.sprinter at the LogiMAT 2010, the intralogistics expert psb continues its market advances in »green logistics« sector.**

At the LogiMAT, the international trade fair for distribution, materials handling and information flow (March 2 – 4, 2010, in Stuttgart/Germany) psb, medium-sized expert in intralogistics system solutions, presents the new shuttle system [vario.sprinter](#). Special focus is put on »green logistics«.

This keyword expresses the current trend in the logistics industry, to develop energy and resource-saving logistics solutions, which do not only protect the environment, but are also "easy on the customers' budgets".

This is not an unknown territory for psb. For many years already, energy efficiency and energy recovery have been of top priority, when discussing about increased performance and optimization of costs in the logistics sector, as it is required by the customers. Intelligent IT and mechatronics, developed by psb, allow for energy-saving transport ways in the warehouse area. The basis of a customized psb system solution is an extendable modular system, with combinable state-of-the-art components.

Only recently, psb AS/RS stacker crane systems with energy recovery technology have been awarded, among others, with the »Trophée Innovation« on the Manutention trade fair in Paris, and with the »MM Logistik Award« on the CeMAT 2008 in Hanover, just to mention a couple of venues.

Now, psb concentrates its many years of experience and expertise in »green logistics«, representing these solutions in the market under the label *»green efficiency – made by psb«*.

In the center of the psb stand, at the LogiMAT, will be the new shuttle system [vario.sprinter](#). This system is recognized for its high performance, a very high degree of flexibility and best possible scalability. The power supply is obtained via a superefficient capacitor, so that the energy recovery module (integrated as standard) is extremely effective. The [vario.sprinter](#) is the perfect complement to the psb AS/RS stacker crane systems. The combined application with the psb order picking module [rotapick](#) – awarded »Best Product« in last year's LogiMAT – allows for a variety of

applications in highly-dynamic systems solutions, as they are required for example, in the returns handling in online mail order business. – Again according to psb's single supplier philosophy, with the added value of all project aspects supplied by a single company only.
